

9200 Series Heavy-Duty Pedestal Mounting Stand Kit

The pedestal stand **MUST** be used with gates that require a chain tray (Typically when gates are longer than 20 feet in length). The chain tray helps support the weight of the chain and reduce the chain stretching that occurs over time.

DoorKing highly recommends using the pedestal stand for gates heavier than 2000 lbs. for a more secure attachment to a larger and heavier concrete pad.

Kit Includes:

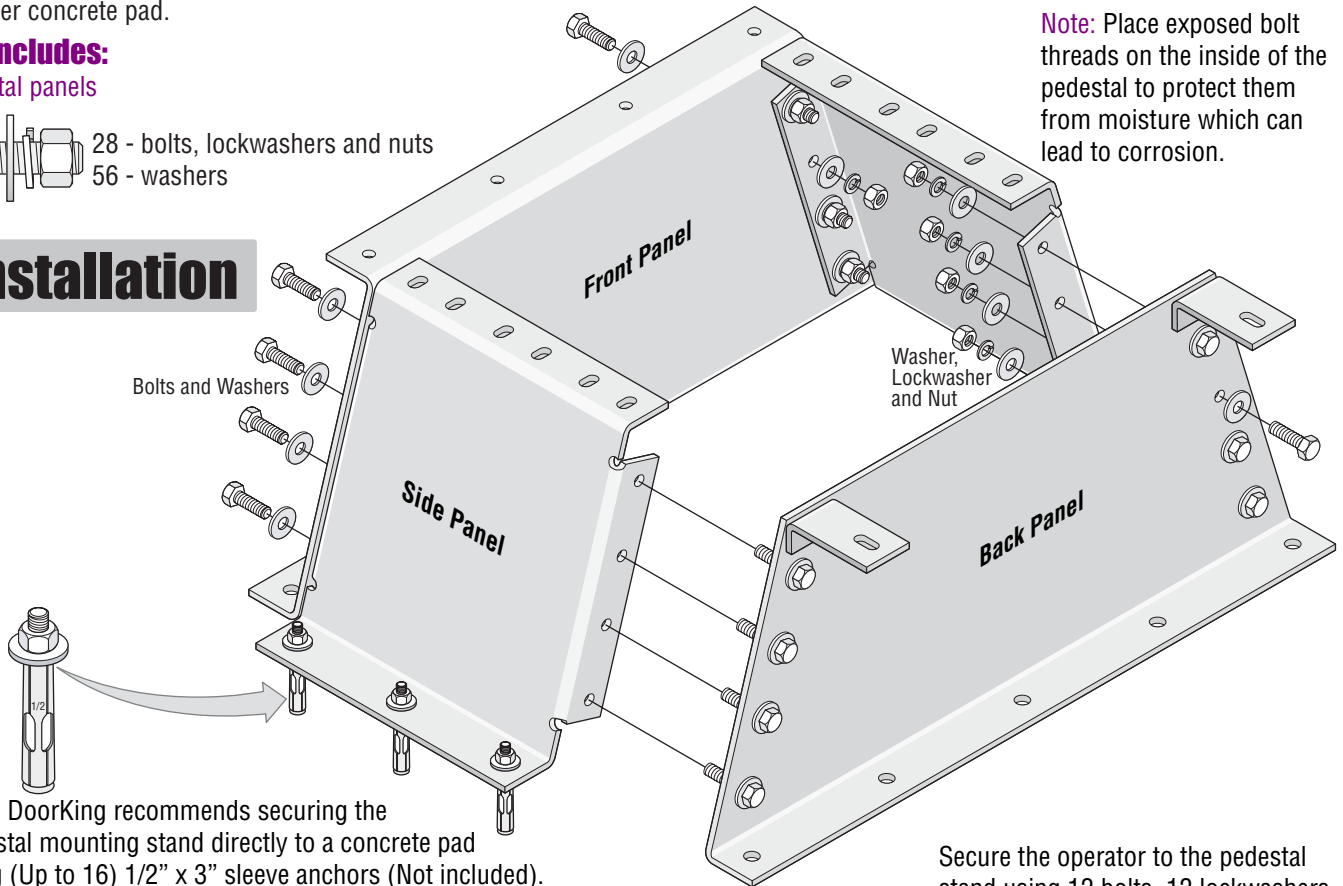

4 metal panels

28 - bolts, lockwashers and nuts
56 - washers

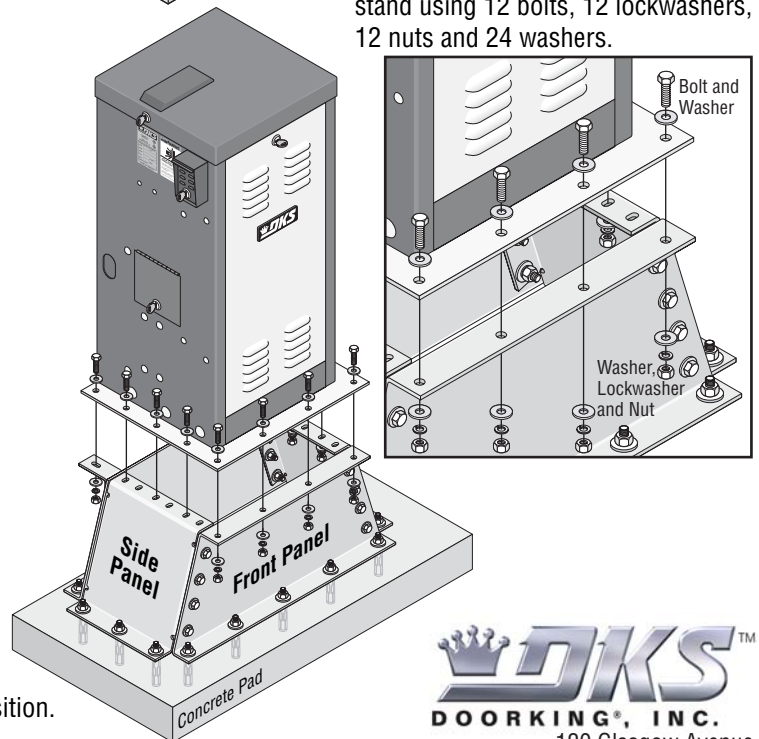

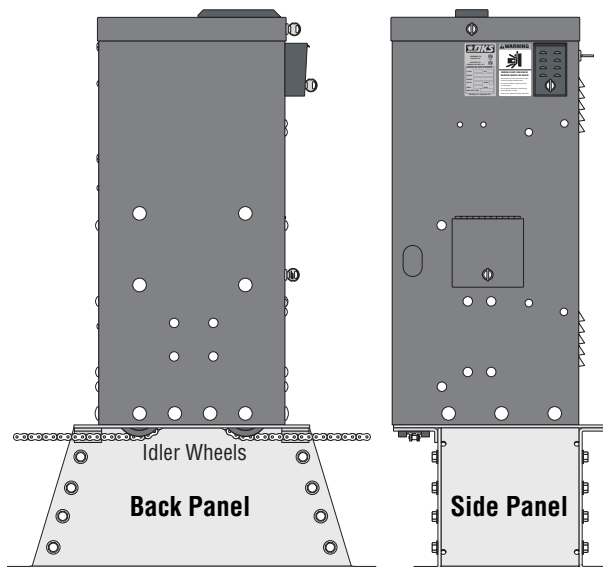

Note: Place exposed bolt threads on the inside of the pedestal to protect them from moisture which can lead to corrosion.

Installation

Note: DoorKing recommends securing the pedestal mounting stand directly to a concrete pad using (Up to 16) 1/2" x 3" sleeve anchors (Not included).

Secure the operator to the pedestal stand using 12 bolts, 12 lockwashers, 12 nuts and 24 washers.

Note: Operator idler wheels shown in the lower operating position.
