69DM 2WIRE TO DIGIBUS CONVERTER

General Information		Specifications
<ul style="list-style-type: none"> □ Quick Disconnect Terminal Blocks □ Electronic Short Circuit Overload Protection □ Surface Wall Installation □ Audio and Video operation □ 2WIRE Signal Converter 	Power Requirements:	12 VDC provided by DigiBus system
	Inputs:	Digibus Audio, Data and Video
	Outputs:	2Wire integrate signal
	Capacity:	Up to 200 2 Wire Stations
	Dimensions:	5.5" x 3.5" x 2" (less covers)

**69DM
2WIRE TO DIGIBUS CONVERTER**

Architects and Engineers Specification

The 69DM 2Wire to DigiBus converter shall allow for multiple 2Wire Riser sections to be incorporated into a Digibus system. This allows the power of the DigiBus head end to be utilized with the simplicity of the 2Wire riser. Apartment mapping provides for quick and easy programming of the apartment stations while allowing for the flexibility of the DigBus numbering system. The Elvox model 69DM is specified
